

Part # P-1410

Reverse Backing Alert System

Premium Wireless LCD Alert System

Premium Series P-1410

- Wireless LCD Display
- Waterproof Controller
- Commercial Series
- 8ft. Detection Sensors

**Added Safety
For Cars, Light and
Commercial Trucks,
SUVs and RVs**

When the vehicle is reversing, 4 rear bumper sensors send out ultrasonic waves 4 times per second that detect obstacles behind the vehicle up to 8 feet away. The waterproof controller receives the signal and transmits to the wireless LCD display with built-in speaker alert.

The wireless LCD display and speaker with 8ft. power cable sounds long intermittent beeps when an obstacle(s) is up to 8ft. from the rear of the vehicle and shows in feet the distance to impact as well as on which side of the vehicle the obstacle is located. As the rear of the vehicle moves closer to the obstacle(s), the beep increases in frequency. Once that distance is 1ft., the alert becomes a continuous sound.

Power is supplied by tapping into reverse lights. The system is activated only when vehicle is on and in reverse.

Easy to Install

Universal Design Fits All Makes And Models

1-Year Warranty

Product Includes:

Waterproof controller, Wireless Premium LCD display with 8ft. power cable, four premium rear 22mm sensors with 9ft. cable that detect obstacles up to 8ft away, four 7 degree wedges, drill bit, scotch lock and owner's manual/installation instructions

Wireless Premium LCD Display:

This wireless display provides ease of installation. When the vehicle is on and in reverse, obstacles up to 8ft. of the rear of the vehicle will be detected. The bright, crisp display will emit a visual alert that indicates the distance to impact and on which side of the vehicle the obstacle is located.
